

Windmill-driven ATADS

Posted by blackburn - 22 Sep 2011 21:54

Hi:

In a Bill and Melinda Gates Foundation Grand Challenges Exploration Grant we are developing a deployable, 9-m windmill driven system with no electrical power to achieve deep pathogen removal using autothermal thermophilic aerobic digestion on a small scale. I would be interested in any and all comments/ contributions this group might want to make. Regards all, Jim Blackburn
